1 Industry/government track paper: Finding similar files in large document repositories

George Forman, Kave Eshghi, Stephane Chiochetti
August 2005 **Proceeding of the eleventh ACM SIGKDD international conference on Knowledge discovery in data mining KDD '05**

Publisher: ACM Press

Full text available: pdf(832.54 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Hewlett-Packard has many millions of technical support documents in a variety of collections. As part of content management, such collections are periodically merged and groomed. In the process, it becomes important to identify and weed out support documents that are largely duplicates of newer versions. Doing so improves the quality of the collection, eliminates chaff from search results, and improves customer satisfaction. The technical challenge is that through workflow and human processes, th ...

1 [A mediation framework for multimedia delivery](#)

Onyeka Ezenwoye, Raimund K. Ege, Li Yang, Qasem Kharm

October 2004 **Proceedings of the 3rd international conference on Mobile and ubiquitous multimedia MUM '04**

Publisher: ACM Press

Full text available: pdf(113.89 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

We present a conceptual mediation framework that features three layers of mediators: *presence*, *integration*, and *homogenization* layers that work together in a peer-to-peer (p2p) manner to facilitate the delivery of multimedia data. On arrival of each request for data from a client, a *global-mediator* is elected from a group of *integration* layer mediators to service that request. Using distributed hash table (DHT), the *global-mediator* dispatches the request to oth ...

1 [The evolution of Coda](#)

M. Satyanarayanan

May 2002 **ACM Transactions on Computer Systems (TOCS)**, Volume 20 Issue 2

Publisher: ACM Press

Full text available: [pdf\(441.35 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Failure-resilient, scalable, and secure read-write access to shared information by mobile and static users over wireless and wired networks is a fundamental computing challenge. In this article, we describe how the Coda file system has evolved to meet this challenge through the development of mechanisms for server replication, disconnected operation, adaptive use of weak connectivity, isolation-only transactions, translucent caching, and opportunistic exploitation of hardware surrogates. For eac ...

Keywords: Adaptation, Linux, UNIX, Windows, caching, conflict resolution, continuous data access, data staging, disaster recovery, disconnected operation, failure, high availability, hoarding, intermittent networks, isolation-only transactions, low-bandwidth networks, mobile computing, optimistic replica control, server replication, translucent cache management, weakly connected operation

1 Semi-asynchronous checkpointing for optimistic simulation on a Myrinet based NOW

Francesco Quaglia, Andrea Santoro
May 2001 **Proceedings of the fifteenth workshop on Parallel and distributed simulation PADS '01**

Publisher: IEEE Computer Society

Full text available: pdf(687.31 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

[Publisher Site](#)

Great effort has been devoted to the design of optimized checkpointing strategies for optimistic parallel discrete event simulators. On the other hand there is less work in the direction to improve the execution mode of any single checkpoint operation. Specifically, checkpoint operations are typically charged to the CPU, thus leading to freezing of the simulation application while checkpointing is in progress, i.e. the execution mode of the checkpointing protocol is typically synchronous. ...
